The Growth of Equity Crowdfunding

CROWDFINANCE OPTIONS FOR PRIVATE COMPANIES—AND SECONDARY MARKETS FOR INVESTORS—WILL KEEP EXPANDING

By David M. Freedman, Editorial Adviser to The Value Examiner and Matthew R. Nutting, Esq.

Most Americans either don’t know what crowdfunding is or still think crowdfunding is narrowly confined to Kickstarter and other rewards-based fundraising websites. In polite company, the terms “securities crowdfunding” or “equity crowdfunding” typically evoke bewilderment, derision, or fear of fraud, oh my.

Meanwhile, start-ups and growing companies have raised billions of dollars through equity-based offering platforms on the Internet. Some exuberant pioneers in this new investment class have predicted that crowdfunding will spark a revolution in private capital markets, if not the redefinition of Wall Street.

A moderate optimist, and one with whom we agree, is Duncan Niederauer, CEO of NYSE Euronext (a merger of the New York Stock Exchange and Euronext NV). Niederauer predicted that equity crowdfunding, if properly done, “will become the future of how most small businesses are going to be financed.”

If equity crowdfunding goes well for issuers and investors, a surging supply (of early-stage equity offerings) and demand (for investment opportunities in those offerings by investors who want to diversify into alternative asset classes) could result in not only phenomenal growth of private capital markets but also “transformative” innovations. Innovation might include not only Web technology that better connects issuers to investors and facilitates disclosures and transactions, but also simplified deal terms, automated valuation “calculators” (see sidebar on page 10), and new business entities (like a Subchapter CF corporation) structured specifically for equity crowdfunding transactions.

THE “NEW” INTERMEDIARY

Crowdfunding is a method of collecting many small contributions, by means of an online funding platform, to finance or capitalize a popular enterprise. Thanks to the phenomenal success of rewards-based crowdfunding platforms like Kickstarter and Indiegogo since 2008, and donation-based sites like GoFundMe since 2010, it was only natural that intermediaries in the angel capital world would exploit and adapt the crowdfunding platform infrastructure, harnessing the power of social networking and e-commerce to accomplish the following objectives:

• Unite start-ups and growing companies with angel investors
• Announce equity offerings, and disclose risks and deal terms
• Enable potential investors to collaborate with one another on deal selection and due diligence
• Facilitate investment transactions.
• Accomplish all of that in a matter of weeks or days, sometimes even hours, at little cost

The Jumpstart Our Business Startups Act of 2012 accelerated the growth of equity crowdfunding. Title II of the JOBS Act

1 Equity-based offering platforms, featuring Regulation D offerings, were at first reluctant to call their operations “crowdfunding” because (before June 2015) they were not open to the “crowd” of nonaccredited investors. The SEC generally uses the term equity crowdfunding portals in reference to Title III of the JOBS Act of 2012, which allows nonaccredited investors to participate, but which has not yet been implemented. Gradually, however, Reg. D platforms have come to be referred to in the media, and in the crowdfunding industry as well, as equity crowdfunding platforms.

2 A December 17, 2013, conference in New York City, cosponsored by Thomson Reuters, was called “Crowdfinance 2013: Redefining Wall Street.”

4 Mary Jo White, SEC chairwoman, speech to the 41st Annual Securities Regulation Institute, Coronado, California, January 27, 2014
Act lifted the ban on general solicitation for securities offerings under Regulation D, Rule 506(c), which allows equity crowdfunding platforms to advertise those offerings, and thereby publicize equity crowdfunding itself, much more widely than before. On-platform Reg. D offerings are still open only to accredited investors, about seven percent of the population.

Title III of the JOBS Act will someday let nonaccredited investors, the other ninety-three percent, participate in private securities offerings, but this exemption (also called Regulation CF) has not yet become effective. The SEC may issue final rules under Title III this year, although it is possible that Congress will revise Title III before the SEC blesses it. The U.K. and Australia are way ahead of the United States in letting average or “unsophisticated” investors participate in equity crowdfunding, but investor demand for crowdfunded securities is still fairly weak in those countries.5

Title IV of the JOBS Act, which became effective in June 2015, does allow nonaccredited investors to invest in “Regulation A+ offerings,” some of which will be made via crowdfunding platforms. The Title IV exemption is structured primarily for growth- and later-stage companies that want to file “mini-IPOs,” not ideal for seed-stage start-ups since compliance costs alone may overwhelm the amount of capital being sought.

Another form of equity crowdfunding is the intrastate securities exemption,6 where issuers with headquarters in a particular state may sell securities to all investors (nonaccredited as well as accredited) who live in that state. At this moment, at least seventeen states have such exemptions in place, and at least one more is awaiting the governor’s signature. Some of these exemptions are variations of Title III of the JOBS Act, in terms of the dollar limits on raises and investment limits for nonaccredited investors. Securities crowdfunding also includes peer-to-peer lending (P2P), more recently known as marketplace lending because true peers (individuals) are being overwhelmed by institutional lenders. Debt-based crowdfunding is a hot sector of the securities markets in the United States and some other countries, including China.

REGULATION D PLATFORMS

Issuers have raised tens of billions of dollars through Reg. D offering platforms since they launched in 2011 in the United States. These early-equity offerings used the Rule 506 exemption under Reg. D. That was before the JOBS Act, which most argue will boost overall volume of capital formation, now that the non-solicitation rules have been relaxed.

What Title II of the JOBS Act did was prompt the SEC to split Rule 506 into parts:

- Rule 506(b) is the “traditional” part, also known as the “quiet deal,” because it retains the ban on general solicitation. For off-platform offerings it permits up to thirty-five non-accredited investors to participate in each deal. This is where many high-tech start-ups have tended to congregate.
- Rule 506(c) is the “new” part, because it lifts the ban on general solicitation. But only accredited investors may participate, on- or off-platform. This is where consumer product and retail companies tend to congregate.

Title II went into effect in 2013 with the full implementation of SEC regulations. Now you might see 506(b) offerings, 506(c) offerings, and Reg. A+ offerings all listed on the same equity crowdfunding platforms. But the tendency among successful platforms these days is to specialize in one kind of exemption or another. So, for example, you will see some tech-oriented crowdfunding platforms with predominantly 506(b) “quiet deals.” Consumer product companies naturally tend to gravitate to platforms that focus on 506(c) deals. You will also find platforms that focus on particular industries, such as real estate—which is the hottest sector of securities crowdfunding after P2P.

According to Crowdnetic’s Q1 2015 Report,7 in the first quarter of 2015 alone, the seventeen most prominent securities offering platforms (not including P2P) in the United States recorded capital commitments totaling about $650 million—a thirty-five percent increase from the previous quarter. These figures represent the performance of offerings under Rule 506(c); they do not include Rule 506(b) offerings, some of which are listed on crowdfunding platforms as well. It is likely that the numbers of 506(b) offerings, and the amount of capital raised thereby, are higher than that of 506(c) offerings. Rule 506(c) allows general solicitation, while Rule 506(b) does not.

---

6 Under Section 3(a)(11) of the Securities Act of 1933
Significantly for the valuation profession, the types of securities offerings that received capital commitments were: equity (sixty-two percent), convertible debt (twenty-two percent), straight debt (nine percent), and other (seven percent). The capital structure of crowdfunding offerings “remains relatively consistent with previous quarters,” says Crowdnetic.

**REGULATION A+ MINI-IPOS**

Under Title IV, the moribund Regulation A exemption was expanded from a five-million-dollar raise limit to a fifty-million-dollar limit, and for raises above twenty-million-dollars (Tier 2 offerings) it preempts blue sky review (i.e., no need for approval by every state in which the offering is made). Blue sky review is still required for offerings less than twenty million dollars in Tier 1. For more details, see the SEC’s “Fact Sheet: Regulation A+” at http://www.sec.gov/news/pressrelease/2015-49.html.

Some Regulation A+ offerings will be listed through online offering platforms. Such platforms may be dedicated to Reg. A+ offerings, or they may feature a mix of Regulation D and Regulation A+ offerings. Neither Reg. D nor Reg. A+ offerings are required to go through intermediaries, though.

Before the JOBS Act, Regulation A issuers could sell unrestricted securities to nonaccredited as well as accredited investors. The expanded Reg. A+ still lets nonaccredited investors participate, but it limits their annual investment in offerings higher than the twenty-million-dollar threshold to ten percent of their income or net worth, whichever is greater. All investors can invest an unlimited amount in Tier 1 offerings up to twenty million dollars.

Professionals in the securities industry are calling Reg. A+ offerings “mini-IPOs,” as issuers are required to go through a scaled-down registration process and file a prospectus-like document called an “offering circular” with the SEC. The benefits of Reg. A+ for seed-stage and start-up companies seem limited mainly because offerings up to twenty-million-dollars still require blue sky review and compliance, which can be costly and time-consuming. Time will tell whether seed-stage and start-up companies try to take advantage of Reg. A+ rather than (or in addition to) Reg. D, intrastate, or someday Title III equity crowdfunding.

“We are still at the first pitch in the first inning of the equity crowdfunding ball game,” says Madelyn Young, content development manager at EarlyShares, a Reg. D platform based in Miami, Florida. Over the next few years we will see how

*Title III offerings may appear on non-broker-dealer funding portals that are registered with the SEC or on broker-dealer platforms.
the various JOBS Act financing schemes really work, what kinds of companies use which exemptions, and how investors perceive value in each new opportunity.

**FRAUD AND CROWD WISDOM**

Of course fraud is everywhere, and it will infect crowdfunding. So far, though, equity crowdfunding has been remarkably fraud-resistant, not only in the United States but also in the U.K. and Australia.

Equity crowdfunding issuers and funding platforms are subject to the antifraud provisions of federal securities law. (Intrastate platforms are subject to state and federal antifraud laws.) 

Platforms that are broker-dealers have an even higher standard for screening out fraudulent offerings. Beyond the legal framework, however, all crowdfunding platforms have something in common that is transformational in terms of fraud prevention: a very powerful social networking component that includes various kinds of discussion forums. Crowds—of donors, backers, or investors—discuss, evaluate, and collaborate (on due diligence, for example) throughout funding platforms.

Ethan Mollick, assistant professor of management at the Wharton School, University of Pennsylvania, concluded in a 2013 study of 48,500 Kickstarter (rewards-based, not equity-based) campaigns that “less than one percent of the funds in crowdfunding projects in technology and product design go to projects that seem to have little intention of delivering their results.” Mollick believes that the low rate of fraud (at least this particular type of fraud) is a result of “the influence of the community,” by which he means the ability of backers and prospective backers to interact with one another on- and off-platform, and with the campaigner/issuer on-platform via open Q&A forums.

Such discussions are similar to those that “take place on other social media sites, blogs, and forums, [as well as] Wikipedia and open-source software development,” writes Mollick, whose main areas of study at Wharton are innovation and early-stage entrepreneurship. “These communities play several important roles in improving offerings, preventing fraud, and making crowdfunding successful. In the case of Kickstarter, communities have successfully detected fraudulent projects.”

The kind of fraud Mollick addresses in his 2013 study is what we call “take the money and run.” To be sure, there are other kinds of fraud in the context of crowdfunding that he does not address, including intentional or negligent misstatement or omission. But Mollick clearly believes in the wisdom of crowds, in the context of both rewards-based and equity-based crowdfunding.

**SECONDARY MARKETS FOR CROWDFUNDED SECURITIES**

Crowdfunded equity investments are generally illiquid because there is no organized secondary market for crowdfunded shares. Secondary markets will emerge, however, not only for private securities in general, but some for crowdfunded shares specifically, as securities crowdfunding grows and evolves.

Congress and the SEC are exploring the idea of allowing venture exchanges to facilitate trading of securities issued by small companies. The proposed Main Street Growth Act, for example, would permit venture exchanges to connect buyers and sellers of small-company securities, but not to process transactions between those parties. The act defines small companies as those—both public and private—with assets under two billion dollars.

CFX Markets will be the first secondary market for crowdfunded shares specifically. CFX “provides an open and secure network to facilitate secondary market transfers of private securities in alternative asset classes” strictly for accredited investors. (See details at http://www.joincfx.com.) It is owned by PeerRealty, a real estate securities crowdfunding platform based in Chicago, Illinois, but it will list crowdfunded shares originating on other platforms as well, including PropertyStake (real estate), CrowdFranchise (franchises), and more in the future.

**ACCREDITED INVESTORS PREDOMINATE**

Because Reg. A+ is brand-new and intrastate securities crowdfunding is slow to emerge, the equity crowdfunding world is still occupied mainly by accredited investors under Reg. D. This might be
comforting to some regulators and investor protection groups, and maybe to some accredited investors who don’t want the world to change.

The world will change. Title III is not dead, though it seems to be hibernating. More states will enact or promulgate intrastate exemptions that welcome nonaccredited investors, with investment limits based on their net worth or income. Some of the exclusive bastions of private securities will be blown wide open, and small, inexperienced angel investors will flood in, some wisely and some recklessly, funding all manner of start-ups. The private capital markets will shudder. This is good.

**EQUITYNET’S STARTUP VALUATION CALCULATOR**

One of the pioneers in equity-based offering platforms in the United States, EquityNet calls itself a “capital marketplace,”—with 17,000 private businesses seeking more than two billion dollars in equity and debt investment capital. The company’s platform offers two versions—one free and the other fee-based—of its automated Valuation Calculator.

According to Judd Hollas, founder and CEO of EquityNet, the fee-based valuation tool uses “hundreds of parameters” for the company being valued, and estimates a valuation based on the discounted cash flow method and correlations with data provided by the 17,000 “peer group” companies in EquityNet’s database. These peers are privately held companies that have registered to have their securities offerings listed on the platform since 2005.

The free, “public” version of the calculator, available at https://www.equitynet.com/crowdfunding-tools/startup-valuation-calculator.aspx, is radically scaled down, with only eight parameters, yielding a “quick ballpark valuation figure.”

Hollas says the fee-based version is being used by companies ranging from seed-stage start-ups to those with $100 million in revenue. It is not necessarily intended to eliminate the need for professional valuation analysis. EquityNet, based in Fayetteville, Arkansas, holds a patent for an “electronic system for analyzing the risk of an enterprise” (US 8,793,171 B2 dated July 29, 2014) that is integrated into the valuation calculator.
Equity crowdfunding is a new tool for innovative and early-stage ventures and is explained by a variety of authors. (Kleinert, Volkmann and Grünhagen 2018, Vulkan et al. 2016, Agrawal, Catalini and Goldfarb 2016). Is equity crowdfunding usage affected by culture? No paper has discussed the secondary market for trading equity. Further research discusses how the implication of the secondary market on the equity crowdfunding market can have contribution to the literature. To which extent can a secondary crowdfunding market enhance the equity crowdfunding market itself? Equity Crowdfunding in the US can be separated into two major types accredited and non-accredited. Non-accredited is also known as Regulated Equity Crowdfunding, campaigns that were launched under new regulations like Title III of the Jobs Act (aka Reg CF). Historically only accredited investors, or wealthy people defined by the SEC were able to invest in businesses offering shares at an early stage, outside of friends and family. There is growth in the overall US Equity Crowdfunding market for entrepreneurs to gain funding in areas that were otherwise not possible. Opportunities will increase as solutions continue to be developed to improve the fund raising process across early stage and late stage public offerings. We break down the top equity crowdfunding sites of 2020 across key areas such as capital raised, number of investors, fees, and more. What are the top equity crowdfunding sites of 2020 for both investors and entrepreneurs? We have broken down the best crowdfunding platforms in terms of the number of investors, capital raised, fees, and other key areas. UPDATED with the latest platform data as of January 2021: numbers below include the latest stats through the end of December 2020. The video reviews the data as of September 2020. Earlier in 2020, we looked at the Top 8 Regulation Crowdfunding (Reg CF) intermediaries ranked by total capital raised and deal flow. We also shared our free funding portal comparison matrix for investors. Also, equity crowdfunding can be seen as a pre-IPO for companies that have just started their growth journey. Companies can raise up to $1 million from a pool of such a big population, which did not exist before. That increases their chance of growth significantly. A possible disadvantage for companies would be the dilution of their shares and established VCs could have less interest in owning shares of the company in the later stages. Final Thoughts. Reward crowdfunding (RCF) platforms such as Kickstarter and Indiegogo have been big hits in the last 10 years, rightfully so. The reason why RCF worked so well is mainly that it is donation-based which stimulates the senses of becoming the first to own a new and exciting product and supporting an exciting startup.
