CONTENTS

Part I

Introduction and object of the study: ... ... ... ... 1 - 23

(A) Introduction: ... ... ... ... ... ... 1-32

Historical pp.1-8; Structure of the stomach in relation to its function pp.9-16; Gastric function pp.9-16; Normal course of secretion of gastric juice pp.16-32.

(B) Object of the study: ... ... ... ... ... ... 22-33

Part II

Materials and methods of work: ... ... ... ... ... ... ... ... 29 - 53

(1) Selection of subjects and general outline of work: 29-30

(2) Methods: ... ... ... ... ... ... ... ... ... ... 33-53

Introduction and the choice of the method of fractional analysis pp.30-37; Examination of the samples of the stomach contents pp.37-40; Examination of the extracts in water of the articles of food pp.40-43; Examination of the samples of the articles of food pp.43-46.

Part III

Experimental, results, discussions, summary and conclusions: 54-143

(1) Alcohol meal: ... ... ... ... ... ... ... ... 54-61

Experimental and results pp.54; discussions pp.54-61; summary and conclusions p.61.

(2) Milk and milk preparations: ... ... ... ... ... ... ... ... 63-75

Experimental and results pp.63-64; discussions pp.64-75; summary and conclusions pp.75-73.

(3) Preparations of rice, wheat and other cereals, pulses, potatoes, etc.: ... ... ... ... ... ... 79-98

Experimental and results pp.79-94; discussions pp.92-96; summary and conclusions p.96-98.

(4) Egg and their preparations: ... ... ... ... ... ... 99-113

(5) Some other non-vegetarian preparations: ... ... ... ... ... ... 114-121

(6) Drinks and some fruit juices: ... ... 135-138
Experimental and results pp. 125-126; Discussions pp. 126-131; Survey and conclusions pp. 131-132.

(7) Listening recall: ... ... ... 133-136

(8) Chemical composition of some cooked and uncooked articles of food: ... ... ... 137-139
Concluding remarks: ... ... ... ... 139-143
Appendix: ... ... ... ... ... ... 1-37
Tables: ... ... ... ... ... 34-37
Bibliography: ... ... ... ... 33-37

This study examines the movement of food item and the estimation of gastric emptying time using the X-radiography techniques, in the clownfish. The effects of temperature on gastric emptying time of malabar blood snapper (Lutjanus malabaricus, Bloch & Schneider 1801) using X-radiography technique. AIP Conf. Proc. 1678, 020032 (2015); 10.1063/1.4931217. Food consumption and digestion time estimation of spotted scat, Scatophagus argus, using X-radiography technique. AIP Conf. The nervous system, and endocrine system collaborate in the digestive system to control gastric secretions, and motility associated with the movement of food throughout the gastrointestinal tract, including peristalsis, and segmentation contractions. Gastric activity involved in digestion is divided into three stages known as the cephalic phase, the gastric phase, and the intestinal phase. These phases overlap and all three can occur simultaneously. View Gastric digestion Research Papers on Academia.edu for free.

Abstract Objective: This study sought to determine whether gastric symptoms are associated with later eating disorder (ED) symptoms during early adolescence, and whether this relationship is moderated by parental warmth/acceptance and/or more. Abstract. Faced with reduced levels of food, animals must adjust to the consequences of the shortfall in energy. We explored how C57BL/6 mice withdrew energy from different body tissues during three months of food restriction at graded levels up to more. Faced with reduced levels of food, animals must adjust to the consequences of the shortfall in energy. 

In vitro Gastric Digestion Method. by Kirstyn Logan. A Thesis Presented to The University of Guelph. In partial fulfilment of requirements for the degree of Master of Science In. Department of Food Science. I thank my research participants for being a part of my study and enduring sometimes less than palatable beverages. I would also like to extend a big thank you to the volunteers and Melissa, without you the clinical trial would not have been possible. Thanks to all my wonderful labmates and peers who have shared the laughs and frustrations of research. The duration of the study was eight tests visits separated by at least one week. It was hypothesized that the in vitro digestate viscosity would correlate to in vivo perceptions of satiety. Gastric evacuation rate. The mean wet and dry weight proportions of the initial meals recovered from the stomachs clearly decreased with time (Fig. 2). Although the linear model gave a significant fit for both wet and dry relationships, F-test for linearity indicated that a non-linear function was more appropriate for both relationships. Feeding ecology of the Indian sand whiting, Sillago sihama (Forskal) inhabiting the Nethavathi - Gurpur estuary. The First Indian Fisheries Forum Proceedings. December, 4-8., Mangalore, Karnataka. Mythical models of gastric emptying and implications for food consumption studies. Envi. Bioi.
